THE ANNALS
of
PROBABILITY

AN OFFICIAL JOURNAL OF THE INSTITUTE
OF MATHEMATICAL STATISTICS

VOLUME 12

1984

CONTENTS OF VOLUME 12

Special Invited Papers, Articles and Short Communicatons

ADLER, ROBERT J. The supremum of a particular Gaussian field .. 436–444

ADLER, ROBERT J. AND FEIGIN, PAUL D. On the cadlaguity of random measures 615–630

ALEXANDER, KENNETH S. Discussion on "Some limit theorems for empirical processes", by Giñe and Zinn 990–991

ALEXANDER, KENNETH S. Probability inequalities for empirical processes and a law of the iterated logarithm 1041–1067

ANDJEL, ENRIQUE D. AND KIPNIS, CLAUDE. Derivation of the hydrodynamical equation for the zero-range interaction process 325–334

BASS, RICHARD F. AND PYKE, RONALD. A strong law of large numbers for partial-sum processes indexed by sets 268–271

BASS, RICHARD F. AND PYKE, RONALD. Functional law of the iterated logarithm and uniform central limit theorem for partial-sum processes indexed by sets 13–34

BENDER, EDWARD A. AND RICHMOND, L. BRUCE. Correlated random walks 274–278

BOLTHAUSEN, E. On the probability of large deviations in Banach spaces 427–435

BROWN, MARK AND GE, GUANGPING. Exponential approximations for two classes of aging distributions 869–875

BROX, TH. AND ROST, H. Equilibrium fluctuations of a stochastic particle systems: the role of conserved quantities 742–759

BRUSS, F. THOMAS. A unified approach to a class of best choice problems with an unknown number of options 882–889

BURKHOLDER, D. L. Boundary value problems and sharp inequalities for martingale transforms 647–702

CHEN, JESSEN AND RUBIN, HERMAN. A note on the behavior of sample statistics when the population mean is infinite 256–261

COHEN, JOEL. E. AND NEWMAN, CHARLES M. The stability of large random matrices and their products 283–310

COX, J. THEODORE. An alternate proof of a correlation inequality of Harris 272–273

COX, J. THEODORE AND GRIMMETT, GEOFFREY. Central limit theorems for associated random variables and the percolation model 514–528

CSISZÁR, I. Sanov property, generalized I-projection and a conditional limit theorem 763–793

DALEY, D. J. AND HALL, PETER. Limit laws for the maximum of weighted and shifted i.i.d. random variables 571–587

DAVIS, BURGESS AND MONROE, ITREL. Randomly started signals with white noise 922–925

DE HAAN, L. A spectral representation for max-stable processes .. 1194–1204

DE HAAN, L. AND RESNICK, S. I. Asymptotically balanced functions and stochastic compactness of sample extremes 588–608
DEHEUVELS, PAUL. Strong limit theorems for maximal spacings from a general univariate distribution 1181–1193
DUDLEY, R. M. Discussion on "Some limit theorems for empirical processes" by Giné and Zinn 991–992
DURRETT, RICHARD. Oriented percolation in two dimensions 999–1040
ELLIS, RICHARD S. Large deviations for a general class of random vectors 1–12
EMBRECHTS, PAUL, MAEJIMA, MAKOTO, AND OMEY, EDWARD. A renewal theorem of Blackwell type 561–570
FALK, M. On the convergence of spectral densities of arrays of weakly stationary processes 918–921
FEIGIN, PAUL D. AND ADLER, ROBERT J. On the cadlaguity of random measures 615–630
FÖLLMER, HANS. Almost sure convergence of multiparameter martingales for Markov random fields 133–140
GAENSSLER, PETER. Discussion on "Some limit theorems for empirical processes", by Giné and Zinn 992–993
GAWRONSKI, WOLFGANG. On the bell-shape of stable densities ... 230–242
GE, GUANGPING AND BROWN, MARK. Exponential approximations for two classes of aging distributions 869–875
GEMAN, DONALD, HOROWITZ, JOSEPH, AND ROSEN, JAY. A local time analysis of intersections of Brownian paths in the plane . 86–107
GINÉ, E. AND ZINN, J. Some limit theorems for empirical processes 927–989
GOLDMAN, A. Temps de sejour et oscillation du mouvement Brownien au voisinage de la sphere Euclidienne 829–842
GREVEN, ANDREAS. The hydrodynamical behavior of the coupled branching process 760–767
GRIFFIN, PHILIP S., JAIN, NARESH C. AND PRUITT, WILLIAM E. Approximate local limit theorems for laws outside domains of attraction 45–63
GRIMMETT, GEOFFREY AND COX, J. THEODORE. Central limit theorems for associated random variables and the percolation model 514–528
HAEUSLER, ERICH. A note on the rate of convergence in the martingale central limit theorem 635–639
HALL, PETER. On the influence of extremes on the rate of convergence in the Central Limit Theorem 154–172
HALL, PETER AND DALEY, D. J. Limit laws for the maximum of weighted and shifted i.i.d. random variables 571–587
HEINKEL, BERNARD. On the law of large numbers in 2-uniformly smooth Banach spaces 851–857
HERRNDORF, NORBERT. A functional central limit theorem for weakly dependent sequences of random variables 141–153

HERRNDORF, NORBERT. An example on the central limit theorem for associated sequences 912–917
HIJAB, OMAR. Asymptotic Bayesian estimation of a first order equation with small diffusion 890–902
HOOGHIEMSTRA, G. AND KENNEDY, D. P. Conditioned limit theorems and heavy traffic 631–634
HOOVER, DOUGLAS, N. Synonymity, generalized martingales, and subfiltration 703–713
HOROWITZ, JOSEPH, ROSEN, JAY AND GEMAN, DONALD. A local time analysis of intersections of Brownian paths in the plane . 86–107
HORVÁTH, LAJOS. Strong approximation of extended renewal processes 1149–1166
JACOBSEN, MARTIN. Two operational characterizations of cooptional times 714–725
JAIN, NARESH C., PRUITT, WILLIAM E. AND GRIFFIN, PHILIP S. Approximate local limit theorems for laws outside domains of attraction 45–63
JAIN, NARESH C. AND PRUITT, WILLIAM E. Asymptotic behavior of the local time of a recurrent random walk 64–85
JANSON, SVANTE. Runs in m-dependent sequences 805–818
KARATZAS, IOANNIS. Gittins indices in the dynamic allocation problem for diffusion processes 173–192
KARATZAS, IOANNIS AND SHREVE, STEVEN E. Trivariate density of Brownian motion, its local and occupation times, with application to stochastic control 819–828
KENNEDY, D. P. AND HOOGHIEMSTRA, G. Conditioned limit theorems and heavy traffic 631–634
KEY, ERIC S. Recurrence and transience criteria for random walk in a random environment 529–560
KIEFFER, JOHN C. A simple development of the Thouvenot relative isomorphism theory 204–211
KIPNIS, CLAUDE AND ANDJEL, ENRIQUE D. Derivation of the hydrodynamical equation for the zero-range interaction process . 325–334
KLASS, MICHAEL J. The finite mean LIL bounds are sharp 907–911
KLASS, MICHAEL J. The minimal growth rate of partial maxima .. 380–389
KORZENIOWSKI, ANDRZEJ. On Marcinkiewicz SLLN in Banach spaces 279–280
LALLEY, S. P. Conditional Markov renewal theory I. Finite and denumerable state space 1113–1148
LEHA, G. AND RITTER, G. On diffusion processes and their semigroups in Hilbert spaces with an application to interacting stochastic systems 1077–1112
LLOYD, STUART P. Ordered prime divisors of a random integer ... 1205–1212
ŁUCZAK, A. Elliptical symmetry and characterization of operator-stable and operator semi-stable measures 1217–1223
MAEJIMA, MAKOTO, OMEY, EDWARD, AND EMBRECHTS, PAUL. A

renewal theorem of Blackwell type 561–570
MARCUS, MICHAEL B. AND ZINN, JOEL. The bounded law of the iterated logarithm for the weighted empirical distribution process in the non-i.i.d. case 335–360
MARTINSEK, ADAM T. Approximations to optimal stopping rules for exponential random variables 876–881
MASON, DAVID M. Weak convergence of the weighted empirical quantile process in $L^2(0, 1)$ 243–255
MONROE, ITREL AND DAVIS, BURGESS. Randomly started signals with white noise 922–925
MUKERJEE, H. G. Almost sure equiconvergence of conditional expectations 733–741
NEWMAN, CHARLES M. AND COHEN, JOEL E. The stability of large random matrices and their products 283–310
NEY, PETER. Convexity and large deviations 903–906
NORBERG, TOMMY. Convergence and existence of random set distributions 726–732
NUALART, D. On the quadratic variation of two-parameter continuous martingales 445–457
OELSCHLÄGER, KARL. A martingale approach to the law of large numbers for weakly interacting stochastic processes 458–479
OMEY, EDWARD, EMBRECHTS, PAUL AND MAEJIMA, MAKOTO. A renewal theorem of Blackwell type 561–570
PHILIPP, WALTER. Discussion of "Some limit theorems for empirical processes", by Giné and Zinn 993–995
POLLARD, DAVID. Discussion on "Some limit theorems for empirical processes", by Giné and Zinn 995–996
POURAHMADI, MOHSEN. On the mean convergence of the best linear interpolator of multivariate stationary stochastic processes ... 609–614
PRUITT, WILLIAM E., GRIFFIN, PHILIP S. AND JAIN, NARESH C. Approximate local limit theorems for laws outside domains of attraction 45–63
PRUITT, WILLIAM E. AND JAIN, NARESH C. Asymptotic behavior of the local time of a recurrent random walk 64–85
PYKE, RONALD. Discussion on "Some limit theorems for empirical processes", by Giné and Zinn 996–997
PYKE, RONALD AND BASS, RICHARD F. A strong law of large numbers for partial-sum processes indexed by sets 268–271
PYKE, RONALD AND BASS, RICHARD F. Functional law of the iterated logarithm and uniform central limit theorem for partial-sum processes indexed by sets 13–34
QUINE, M. P. AND ROBINSON, J. Normal approximations to sums of scores based on occupancy numbers 794–804
RESNICK, S. I. AND DE HAAN, L. Asymptotically balanced functions and stochastic compactness of sample extremes 588–608

RHEE, WANSOO AND TALAGRAND, MICHEL. Bad rates of convergence for the central limit theorem in Hilbert space 843–850
RICHMOND, L. BRUCE AND BENDER, EDWARD A. Correlated random walks 274–278
RITTER, G. AND LEHA, G. On diffusion processes and their semigroups in Hilbert spaces with an application to interacting stochastic systems 1077–1112
ROBINSON, J. AND QUINE, M. P. Normal approximations to sums of scores based on occupancy numbers 794–804
ROSEN, JAY. Self-intersections of random fields 108–119
ROSEN, JAY, GEMAN, DONALD AND HOROWITZ, JOSEPH. A local time analysis of intersections of Brownian paths in the plane . 86–107
ROSENBLATT, M. Asymptotic normality, strong mixing and spectral density estimates 1167–1180
ROST, H. AND BROX, TH. Equilibrium fluctuations of stochastic particle systems: the role of conserved quantities 742–759
RUBIN, HERMAN AND CHEN, JEESEN. A note on the behavior of sample statistics when the population mean is infinite 256–261
SAMUEL-CAHN, ESTER. Comparison of threshold stop rules and maximum for independent nonnegative random variables 1213–1216
SAMUR, JORGE D. Convergence of sums of mixing triangular arrays of random vectors with stationary rows 390–426
SHREVE, STEVEN E. AND KARATZAS, IOANNIS. Trivariate density of Brownian motion, its local and occupation times, with application to stochastic control 819–828
SOLTANI, A. REZA. Extrapolation and moving average representation for stationary random fields and Beurling's theorem 120–132
STADTMÜLLER, ULRICH. A note on the law of iterated logarithm for weighted sums of random variables 35–44
STOUT, QUENTIN F. AND WARREN, BETTE. Tree algorithms for unbiased coin tossing with a biased coin 212–222
STUTE, WINFRIED. The oscillation behavior of empirical processes: The multivariate case 361–379
STUTE, WINFRIED. Discussion on "Some limit theorems for empirical processes", by Giné and Zinn 997–998
TALAGRAND, MICHEL AND RHEE, WANSOO. Bad rates of convergence for the central limit theorem in Hilbert space 843–850
UHRIN, BÉLA. Some remarks about the convolution of unimodal functions 640–645
USTUNEL, A. S. Additive processes on nuclear spaces 858–868
VANDERBEI, R. J. Probabilistic solution of the Dirichlet problem for biharmonic functions in discrete space 311–324
WARREN, BETTE AND STOUT, QUENTIN, F. Tree algorithms for unbiased coin tossing with a biased coin 212–222
WATKINS, JOSEPH C. A central limit problem in random

evolutions 480–513
WEIS, LUTZ W. A characterization of orthogonal transition kernels 1224–1227
YAMATO, HAJIME. Characteristic functions of means of distributions chosen from a Dirichlet process 262–267
ZAMAN, ARIF. A non-clustering property of stationary sequences .. 193–203
ZAMAN, ARIF. Urn models for Markov exchangeability 223–229
ZINN, JOEL AND MARCUS, MICHAEL B. The bounded law of the iterated logarithm for the weighted empirical distribution process in the non-i.i.d. case 335–360
ZINN, J. AND GINÉ, E. Some limit theorems for empirical processes 929–987
ZHANG, YU AND ZHANG, YI CI. A limit theorem for N_{0n}/n in first passage percolation 1068–1076
ZHANG, YI CI AND ZHANG, YU. A limit theorem for N_{0n}/n in first passage percolation 1068–1076

Notes and Corrections

BERMAN, SIMEON M. Correction to "Sojourns and extremes of Gaussian processes" 281
GOROSTIZA, LUIS G. Correction to "High density limit theorems for infinite systems of unscaled branching Brownian motions" ... 926–927
KURTZ, THOMAS G. Acknowledgement of Priority 282
